

**Bob Banks**, general manager of Schütz UK, said: “A **very promising new generation of drums** has been developed on the basis of our revolutionary multilayer extrusion process. This applies particularly to the **substitution of conventional steel drums**. Given the prevailing market requirements, we will in future be concentrating on the three-layer, F1 tight-head drum as well as our standard products. ”

### UNICOR succeeds with large-sized corrugators on all five continents

KWD-globalpipe, 2007-05-15, No 243. **UNICOR GmbH** (Corporation)– manufacturer of machines for the production of corrugated pipes (corrugators) **based in „Lower Franconia“, Bavaria, Hassfurt** – is now also **represented in the large-sized pipe range on all five continents** due to another very successful start-up of several production lines of the types UC 500 and UC 1200 in Australia in March 2007.

The decision for the **acquisition of UNICOR corrugators in Australia**, a country with a continuously growing high demand on **perfectly working drainage and sewerage systems**, not only results from UNICOR's worldwide good reputation but from the **high experience in the large-size pipe sector**

UNICOR gained in other countries with similar ecological preconditions.

Especially countries of the southern hemisphere suffer of the effect of evaporation of water on the surface or the draining away of water at the wrong places after long periods of droughts. This effect is caused by the application of **open waste-water disposal lines (sewage lines) by trench systems** that are still usual.

The **change to closed waste-water disposal lines (sewage lines) by the use of corrugated plastic pipes** therefore increases more and more and demands highest output rates from the pipe producing company. In order to face this timely and environmental technological urgency more and more customers make their decision for **UNICOR corrugators that guarantee for fastest pipe production and lowest fail-**

**ures of the machines.**

### Cincinnati Extrusion offers extrusion equipment for booming market for plastic hot water pipes

KWD-globalpipe, 2007-05-15, No 243. Laying of plastic pipes is a simple, easy and clean business. Convincing arguments that, together with the **corrosion-resistance** of such pipes and, last but not least, the **rising costs of copper and steel**, have **led to a boom in plastic pipes** for water transport. **Cincinnati Extrusion GmbH, Vienna, Austria** offers custom-made extrusion lines for all materials needed to serve this growth market, such as PEX, PP, PE-RT and composites.
